

FEINE GIPS

For builders

Typical assembly and installation work at construction sites with

Krone Feine Gips

ELEKTRIKERGIPS

Electrician's Plaster

Construction product based on gypsum binder

Rapid setting, fast hardening

For universal setting, fixing, filling and plastering

On all suitable standard substrates in construction

Just add clean water

Easy to mix, smooth consistency

Easy to work by hand

Processing time **about 10 minutes**

Healthy for the home Indoor Air Comfort® GOLD from Eurofins

For interiors

Technical data sheet
Electrician's Plaster
Construction and installation plaster

Construction product and intended use	
Description	Fast-setting gypsum binder in powder form without factory additives
Harmonised European standard	EN 13279-1
Designation and abbreviation	Gypsum binder A1
Quality control	Initial type testing and factory production control
Approximate shelf life	12 months Store in a dry area; protect from moisture absorption. Close open containers firmly and use material in the near future
Special characteristics	Proven gypsum building material from domestic raw materials Construction product in accordance with the harmonised European Standard Rapid strength development and high strength
Intended use	Assembly, installation and touch-up work Fixing of plaster beads and bands Closing cavities, holes, gaps Universal fixing, application, filling, plastering
Range of applications	On all suitable substrates in interior construction
Technical properties	
Reaction to fire	Non-combustible Class A (no contribution to fire) according to 96/603/EC
Approximate consumption (as an example)	On 1 l volume approx. 1.0 kg material , e.g. when closing gaps
Approximate application time	0:10 h:min, hour from mixing to start of setting Recommendation Adjust the amount of material needed to the working time.
Processing conditions and application procedure	
Approx. mixing water (as an example)	650 ml of clean water to 1.0 kg material 3 – 3.2 l of clean water to 5.0 kg material Recommendation The temperature of the mixing water must be at least +5 °C and not over +30 °C. Very cold water can interfere with the setting process, while very warm water can accelerate this process.
Mixing procedure	Add water, sprinkle in material up to the water line and allow to soak. Do not mix with foreign material and/or additives. After soaking, briefly and intensively mix by hand. Material that has already started to set cannot be reused by adding more water and/or mixing again. Clean equipment and tools immediately after use. Recommendation Tools and containers must be cleaned before each new mixing process. Residues of material on tools and in containers can accelerate the setting process.
Application	By hand
Substrate	Before starting work, it must be taken into account whether the substrate is sufficiently stable, level, dimensionally stable, rough, dry, free of dust and frost, and – especially in the case of concrete – free of residues of anti-caking agents and whether it exhibits normal, uniform absorbency. If its condition deviates from this, then measures must be taken to improve the condition of the substrate before starting work. Recommendation Depending on the type of application, pre-treat highly absorbent substrates and/or substrates with varying absorbencies with Krone Feine Gips Primer, dense and/or non-absorbent or slightly absorbent, smooth substrates with Krone Feine Gips bonding agent.
Air and component temperatures	During pre-treatment and assembly work, the temperature must be at least +5 °C and no higher than +30 °C. Very low temperatures can interfere with the setting process, while very high temperatures can accelerate this process. Protect from frost and intense heat until complete hardening.
