2.3. Other hazards

Hazard designation 'Irritant' does not apply to dry powder, but only applies after exposure to moisture or water (alkaline reaction).

The preparation is low in chromate according to the regulation, as the content of sensitizing chromate (VI) is reduced to < 2 ppm in the cement content of the ready-to-use mortar by means of additives.

A prerequisite for the effectiveness of chromate reduction is proper storage and observance of the expiration date. In case of improper storage (ingress of moisture) or overstorage, however, the chromate reducer contained may lose its effectiveness prematurely and the cement/binding agent may have a sensitizing effect on skin contact (H317 or EUH203)

SECTION 3: Composition/information on ingredients

3.2. Mixtures

Chemical characterization

Cement product for which the amount of chromium VI was decreased to < 0,0002 % by a reduction agent (related to the total dry weight).
